Nexora Retail Nigeria Ltd. — Dashboard QA Report

Model: Nexora_Retail_Nig_LTD_Tentative_Dashboard_10_11_2026_Finalized · QA dates: 9–14 October 2026 · Data window: Jan 2025 – Jun 2026

1. Summary

QA covered the semantic model, the data behind it, every measure the 47-point checklist depends on, and the dashboard pages and narrative. **All 47 checks pass.** Section 7 holds the final status of every check and supersedes the statuses in sections 2 and 5.

Outcome	Checks
Pass, verified by QA against the model and data	30
Pass, confirmed by the report owner's manual test	17
Open	0
Total	**47**

No critical data-integrity failures remain. The model reconciles: net revenue ₦3,305,513,480.50, gross profit ₦754,262,980.50, 6,000 orders, 19,396 units, with no duplicate keys, orphan rows or invalid values in the fact table.

Items for the report owner: none open. The earlier items (revenue change, return incidence text, inferred-brand disclosure, new segment labels and the manual checks) are closed; see sections 6 and 7.

2. Results by section

Severity is Critical for every check except CUS-08 and TIME-07, which are Important.

Executive Overview

ID	Status	Evidence
EXEC-01	Pass	Target achievement is 96.90% (Net Sales ₦3,443.9M against target ₦3,554.1M).
EXEC-02	Pass	Gross profit is ₦754.26M.
EXEC-03	Pass	Gross margin is 22.82% (gross profit over net revenue).
EXEC-04	Pass	Unit return rate is 2.92% (566 returned of 19,396 units).
EXEC-05	Not tested	Needs the report text.
EXEC-06	Not tested	Needs the report text.
EXEC-07	Not tested	Needs the report text.

Commercial Diagnostics

ID	Status	Evidence
COM-01	Pass	The seven categories sum to ₦3,305.5M revenue and ₦754.26M gross profit, with margin and return rate per category (appendix A).
COM-02	Pass	Computing is 50.2% of revenue (the largest category) with 20.6% margin against 22.8% overall, and a 4.08% return rate against 2.92% overall.
COM-03	Pass	Mobile has the highest return rate at 6.37%. Computing is second at 4.08%.
COM-04	Pass	The four discount bands sum to the totals. Margin falls as discount rises: 26.7%, 23.2%, 19.0% and 11.7% (appendix A).

ID	Status	Evidence
COM-05	Pass (note)	The data supports a margin-erosion statement only. Nothing in the data tests whether discounts change sales volume, so any causal claim about sales is unsupported. Wording still to be confirmed on the page.
COM-06	Pass (note)	WhatsApp/Phone is 12.4% of revenue with 634 orders, a 22.5% margin, the lowest return rate (2.36%) and the highest average order (₦648K). That supports "potential" but does not prove it scales.
COM-07	Pass (note)	Concentration is real: the top 5 products are 37.2% of revenue, the top 10 are 58.7%, and the Orion brand alone is 33.1%. Keep it labelled exploratory.

Customer Analysis and Customer Details

ID	Status	Evidence
CUS-01	Resolved	Customer Return Incidence is distinct from the 2.92% unit return rate. The measure now divides customers with returns (344) by purchasing customers (997) = **34.5%**. The earlier 34.4% divided by all 1,000 customers, which becomes wrong under any date filter. Decision: keep 34.5% and update the report text.
CUS-02	Resolved	The segment rules left 118 customers in a default "Occasional" bucket although they had 2 or more orders. Two segments were added (section 3). All 1,000 customers now sit in exactly one segment.
CUS-03	Pass	Recency is coded as stated: over 180 days is Lapsed, 90 days or fewer is Active, and 91–180 days is At Risk (high-value customers).

ID	Status	Evidence
CUS-04	Partially tested	The revenue quantiles are verified (P20 ₦1.44M, P80 ₦4.80M across customers with revenue). There is no frequency-band field in the model, so the bands must be set inside a visual and were not checked.
CUS-05	Not tested	Needs the report text.
CUS-06	Pass	Revenue summed over customers equals the total (₦3,305,513,480.50). Segment counts sum to 1,000. Per-customer measures divide by purchasing customers.
CUS-07	Not tested	Needs the drill-through page.
CUS-08	Not tested	Needs the details page (Important).

Store Analysis

ID	Status	Evidence
STO-01	Pass	Store target achievement is Net Sales over target, and store totals sum to the overall figures (appendix B).
STO-02	Pass	Kano is 86.48% achievement with a 4.06% return rate.
STO-03	Pass	Exactly three stores are above target: Ikeja (102.80%), Abuja (102.64%) and Victoria Island (101.25%).
STO-04	Pass	Store margins span only 22.51% to 23.16%, a 0.65 percentage-point range, so they should not be described as materially different.

ID	Status	Evidence
STO-05	Resolved	The year-on-year measure showed about +200% for every store when no date range was selected, so it was removed (the prior-year measures were also deleted). For reference, H1 2026 against H1 2025 net revenue is Ikeja +11.9%, Victoria Island +6.5%, Abuja −12.0% and Kano −10.3%.
STO-06	Not tested	Needs the drill-through page.
STO-07	Pass (note)	At model level a store filter flows correctly to sales and to targets. Visual-level behaviour still to be confirmed.
STO-08	Not tested	Needs the report text.

Product Analysis

ID	Status	Evidence
PRD-01	Pass	Category totals and margins reconcile (appendix A). Brand revenue also sums to the total.
PRD-02	Not tested	Needs the page.
PRD-03	Action needed	PRD001 and PRD021 (Orion) and PRD031 (Apex) have a blank raw brand. The cleaned brand was inferred from the product name. They carry ₦202M, or 6.1% of revenue. Disclose this on the page.
PRD-04	Pass (note)	Concentration in the data is real (COM-07), so any claim should be framed as exploratory.
PRD-05	Not tested	Needs the report text.
PRD-06	Not tested	Needs the drill-through page.

Sales Rep Analysis

ID	Status	Evidence
REP-01	Pass	The 32 reps sum exactly to the totals for revenue, gross profit, orders, units and returned units.
REP-02	Pass (note)	Revenue does not line up with performance band or return rate. REP004 is band C but fourth by revenue, and REP002, second by revenue, has the best return rate (0.92%). Rep margins sit in a narrow 21.95–23.83% range.
REP-03	Not tested	Needs the drill-through page.
REP-04	Pass (note)	The return denominator is each rep's own units sold, attributed to the selling rep. Rep rates rest on only 8 to 33 returned units each, so they are noisy.

Time Analysis and Month Diagnostics

ID	Status	Evidence
TIME-01	Pass	H1 2025 and H1 2026 reconcile to the monthly figures (appendix C).
TIME-02	Resolved	Five of the six changes are correct. Revenue is **−1.30%** on Net Sales, not −1.35% (Net Revenue is −1.21%). The report text is being updated to −1.30%.
TIME-03	Pass	All visuals use Year Month, which sorts chronologically.
TIME-04	Pass	Both periods are Jan to Jun, so the comparison is like for like.
TIME-05	Not tested	Needs the report text.
TIME-06	Not tested	Needs the report text.
TIME-07	Not tested	Needs the page titles (Important).

3. Model changes made during QA

1. **Per-customer measures.** Added `PurchasingCustomers` (distinct customers with a sale in the current filter). `NetRevenuePerCustomer`, `GrossProfitPerCustomer`, `NetSalesPerCustomer`, `ReturnIncidence%` and `OrderPerCustomer` now use it. Before this, `Customers` returned 1,000 in every period (June 2026 had 276 buyers), which understated per-customer values by about 3.6 times. `Customers` itself is unchanged.
2. **`ActiveCustomers`.** Redefined as customers who bought in the 180 days ending on the last date of the selection. Previously it was fixed to the last date in the model and was blank for all of 2025. The total remains 848.
3. **Currency.** `GrossSales`, `DiscountValue`, `RefundValue` and the `ListPrice` and `RefundAmount` columns now display in ₦ instead of $.
4. **Targets.** The relationship between `FactTargets` and `DimDate` was rebuilt as many-to-many with a single filter direction (date to targets), replacing a bidirectional one. `SalesTarget` and `SalesVariance` return blank when a visual has individual dates on its axis, because a day would otherwise show the full month's target. Targets still total ₦3,554,057,000.
5. **`AverageDiscount%`.** Now sales-weighted (discount value over gross sales): 4.80% overall, previously an unweighted 4.68%.
6. **Segments.** `CustomerSegment` keeps its original rules, with new rules added after them:
   - 5 or more orders but revenue below P20: **Frequent Low Value** (61 customers).
   - 2 to 4 orders, last purchase 91–180 days ago: **Cooling Customer** (57 customers).
   - Exactly 1 order: **Occasional Customer** (now 1 customer).
   - Anything else: Unclassified (currently none).
7. **Housekeeping.** Raw columns (`PaymentMethod`, `ReturnQty`, `ReturnReason`, `Brand`, `City`, `RefundAmount`) hidden. `ShippingDate` no longer sums.
8. **Removed.** `YoYGrowth%` (and, by the report owner, the prior-year measures).
9. **Done by the report owner.** Typos fixed and auto date/time turned off.

One incident: the first attempt to set the targets relationship to a single direction pointed the filter the wrong way and showed the full target in every period. It was caught in testing, reverted at once, then rebuilt correctly and re-verified.

4. Known data conditions left as is (by decision)

- **Impossible dates.** 764 sales lines are dated before the product's launch date, and 285 before the customer's signup date.
- **Value casing.** "Sme" and "Pos" appear in source values.
- **No prior-year comparison for 2025.** There is no 2024 data.
- **Single-day target view.** Selecting a single day with a slicer still shows the month's target, because the guard only works when the date is on a visual axis.

5. Items still to be tested manually

ID	What to check on the report
EXEC-05, 06, 07	Narrative matches detail pages. No unsupported causal claims. Recommendations rest on the validated evidence above.
CUS-05	Regional customer counts are not described as commercial value.
CUS-07, CUS-08	Customer drill-through returns the selected customer. Field labels and formats are consistent.
STO-06, STO-08	Store drill-through shows exactly one store. Kano's causes are framed as needing investigation.
PRD-02, 05, 06	Aggregation level is stated. High-margin, low-volume products are not recommended for expansion on margin alone. Product drill-through shows the right product.
REP-03	Rep detail page filters to the selected rep.
TIME-05, 06, 07	No forecasts. Exploratory analyses are labelled. Page titles state each diagnostic's scope.

Appendix A. Category, discount and channel reconciliation

Category	Net revenue	Gross profit	Margin	Return rate
Computing	₦1,657.9M	₦342.0M	20.63%	4.08%
Mobile	₦517.7M	₦104.7M	20.22%	6.37%
Displays & Office	₦418.8M	₦102.4M	24.46%	3.79%
Accessories	₦220.1M	₦65.3M	29.67%	2.46%
Networking	₦209.0M	₦61.2M	29.29%	2.09%
Power & Storage	₦208.3M	₦54.7M	26.27%	2.78%
Software & Services	₦73.8M	₦23.9M	32.43%	0.82%
Total	**₦3,305.5M**	**₦754.3M**	**22.82%**	**2.92%**

Discount band	Net revenue	Gross profit	Margin
0%	₦1,208.2M	₦322.4M	26.69%
0.1%–5%	₦1,115.5M	₦258.6M	23.18%
5.1%–10%	₦798.0M	₦151.7M	19.01%
Over 10%	₦183.8M	₦21.6M	11.75%

Channel	Share of revenue	Orders	Margin	Return rate
InStore	59.8%	3,734	23.00%	2.68%
Online	27.7%	1,632	22.58%	3.68%
WhatsApp/Phone	12.4%	634	22.50%	2.36%

Appendix B. Store reconciliation

Store	Net sales	Target	Achievement	Margin	Return rate
Ikeja Experience Centre	₦548.0M	₦533.1M	102.80%	23.16%	2.79%

Store	Net sales	Target	Achievement	Margin	Return rate
Abuja Central Store	₦528.4M	₦514.8M	102.64%	22.74%	2.97%
Victoria Island Store	₦480.7M	₦474.8M	101.25%	22.85%	2.91%
Port Harcourt Store	₦451.7M	₦465.5M	97.04%	22.85%	2.56%
Ibadan Store	₦362.0M	₦384.8M	94.07%	22.75%	2.53%
Enugu Store	₦338.7M	₦363.3M	93.23%	22.51%	3.00%
Benin City Store	₦395.8M	₦426.2M	92.85%	22.87%	2.85%
Kano Store	₦338.6M	₦391.5M	86.48%	22.63%	4.06%

Appendix C. H1 2025 against H1 2026

Measure	H1 2025	H1 2026	Change
Net Sales	₦1,095,985,299.50	₦1,081,714,936.50	**−1.30%**
Net Revenue (after refunds)	₦1,048,133,927.00	₦1,035,437,131.50	−1.21%
Gross profit	₦236,890,727.00	₦236,990,131.50	+0.04%
Orders	1,909	1,857	−2.72%
Units sold	6,111	6,122	+0.18%
Gross margin	22.60%	22.89%	+0.29 pp
Unit return rate	2.70%	3.56%	+0.86 pp

6. Round 2 — narrative, dashboard export and second checklist (9 Oct 2026)

Reviewed the portfolio narrative, the 9-page dashboard export (pages 7–9 are the store, product and month drill-throughs) and the FILE/VIS/MOD/DAX/KPI/INS checklist. The report owner confirmed the VIS checks and both FILE checks passed. This section supersedes any earlier status it contradicts.

6.1 Model changes made this round

1. **Customer segments (defect fixed).** `RevenueP20` and `RevenueP80` cleared only the customer-ID filter, so in a matrix grouped by name, region or city each row's thresholds were computed over that one customer. Customers with ₦0.68M revenue showed as "High value Active". The thresholds now use all customers (P20 ₦1,440,605, P80 ₦4,802,543), and `CustomerSegment` and `RecencyDays` are blank unless exactly one customer is in scope, so the Total row no longer carries a segment. Verified: no High value row below P80, no Loyal Core below P20, no Frequent Low Value at or above P20, and no unclassified customers.
2. **`SalesTarget` guard extended.** It is now blank whenever a product, sales rep, customer attribute or sales-fact filter (such as channel or discount band) is active, because targets exist only per store and month. Unfiltered it is ₦3,554,057,000, June 2026 is ₦183,510,000 and Ibadan is ₦384,823,000, all unchanged. Achievement is 96.90%. **Behaviour change:** selecting a Channel, Region or City slicer on the Executive page now blanks the target figures instead of showing a misleading percentage.
3. **Earlier changes confirmed present** in the current working file (`…_10_9_2026_working`), including the sales-weighted discount, purchasing-customer denominators and month-over-month guard.

6.2 Narrative corrections (applied to the corrected narrative file)

Section	Was	Now	Source of truth
3	Software & Services margin 32.39%	32.43%	Model
4	WhatsApp/Phone revenue ₦408.9M	₦410.9M	Model
4	WhatsApp/Phone average order about ₦646,000	about ₦648,000	Dashboard ₦648,105.75
4	WhatsApp/Phone return rate 2.37%	2.36%	Dashboard
5	Margin above 15% discount 8.18%	Kept (correct, 157 lines); added the dashboard's above-10% band, 11.75%	Model

Section	Was	Now	Source of truth
6	Defective-return refunds ₦47.5M	₦46.3M	Model
10	Net Revenue declined 1.35%	Net Sales declined 1.30%	Model
12	—	Added data conditions: pre-launch (10.6% of Net Revenue) and pre-signup (2.7%) sales, three inferred brands, 12 unspecified cities and payment methods	Model

All other quantitative claims were verified: KPIs, category and channel margins and return rates, the 566 / 19,396 return rate, the defective share (194 units, 34.3%), store figures, customer segment shares, 848 active customers, region order, rep figures, and the quarterly achievement range (95.09% in Q4 2025 to 98.77% in Q2 2026).

6.3 Items needing manual action in Power BI Desktop

#	Page	Action
1	Customer matrix (4)	Add `CustomerID` to the matrix. It has 994 rows for 1,000 customers because 6 same-name customers merge into one row (those rows now show a blank segment).
2	Product drill-through (8)	The "Top 10 Sales Representatives" Total row is the top-10 subtotal (138 units, 59 orders), not the product total (444 units, 200 orders). Remove or relabel it and state the ranking basis. Give "Store Performance Leaderboard" a metric and axis title.
3	Time (6)	Add a page title. The two area charts use different truncated y-axis ranges, so set them to match.
4	Sales rep (5)	The table uses Net Revenue but the scatter x-axis uses Net Sales; align them. Rename "Efficiency Scatter" to a descriptive title.

#	Page	Action
5	Month drill-through (9)	Month-over-month growth is Net Revenue based, but only Net Sales is shown; add a Net Revenue card. Enlarge the back button to match pages 7 and 8.
6	Customer (3)	The Customers card shows 1K while per-customer measures divide by 997 purchasers; relabel or use the purchasing-customer count. Use one colour for SME across the scatter and donut.
7	Commercial (2)	Retitle "Revenue Growth Trend" as month-over-month growth. Hide the empty "Not Applicable" return reason. Fix clipped column headers and the "Whatsapp/Phon" label.
8	Executive (1)	Show Orders as 6,000 rather than 6K. Check target visuals after the slicer behaviour change in 6.1.
9	Traceability	The narrative quotes figures no page shows: store margins and return rates for all stores, quarterly achievement, the H1 comparison, and the above-15% discount margin. Either add them to the dashboard or state in the narrative that they come from the model.
10	Naming	The dashboard says "Nexora Retail Nigeria Ltd." and the narrative says "Nexora Retail Ltd."; choose one.
11	Model housekeeping	Delete whichever of `AverageOrderValue` and `NetRevenuePerOrder` is unused, decide whether to keep `GrossProfitTarget`, rename `DImStores`, and move the source workbook out of Downloads before any shared refresh.

6.4 Second checklist outcome

KPI-01 to 16 and the five arithmetic identities pass. MOD and DAX checks pass apart from the items already fixed, and the VIS and FILE checks are reported passed by the owner. INS checks pass after the narrative corrections above, subject to item 9 (traceability). Not run by me: refresh in any environment other than this machine.

6.5 Closure status (9 Oct 2026)

The report owner has applied every manual item in 6.3. Two decisions are recorded: the Revenue Growth Trend keeps its title because it drills up to quarterly growth, and the company name is **Nexora Retail Nigeria Ltd.**, now used in the narrative too. Housekeeping done: `DimStores` renamed, duplicate measure removed (40 measures remain).

Final regression on the working file: all 16 frozen KPIs and 5 arithmetic identities pass, with no orphan keys, no duplicate sale lines (10,433 rows) and every measure executing. Customer segments, the target guards and the month-over-month guard behave as specified (month-over-month for March 2025 is 24.07% against a prior month of ₦151,565,743).

Resolved (14 Oct): auto date/time is switched off in the Finalized file. The model has 8 tables and no `LocalDateTable` or template tables. Refresh was tested only on the machine that holds the source workbook until the owner's cross-machine test (section 7).

6.6 Regression test: date slicers, hierarchies, visuals and drill-through (11 Oct 2026)

Run against the `…_10_9_2026_working` file, with the source on the Google Drive path. Model-side tests only; page rendering and click-through navigation need a manual pass using the expected values below.

Area	Result
Date table	17 of 17 pass: 546 contiguous days (1 Jan 2025 to 30 Jun 2026), no gaps or duplicates, every slicer column maps one-to-one, all sales dates and target months resolve. The model has no user-defined hierarchies and no auto date/time tables, so drill-up depends on the visual axes (Year Quarter, then Year Month).
Slicer combinations	All partitions (year, quarter, month name, year-quarter, year-month, day) add back exactly to the totals for Net Revenue, Orders and Sales Target. Year, Month and Quarter slicers combine correctly, and contradictory slicers return blank. H1 2025 and H1 2026 Net Sales and targets match the earlier reconciliation.

Area	Result
Drill-through	Ibadan Store, NovaCore USB-C Hub and March 2025 reproduce every KPI in the 9 Oct dashboard export exactly (28 of 28 values). All 8 stores, 50 products, 32 reps and 18 months have unique names, no blank figures, and add back to the totals.
Regression found and fixed	`MoMGrowth%` returned blank at quarter and year level after the month-over-month guard, so drilling up on the Revenue Growth Trend would have shown an empty chart. It now returns month-over-month for one month and true quarter-on-quarter growth for one quarter (Q2 2025 −11.33%, Q3 2025 +19.36%, Q4 2025 +7.83%, Q1 2026 −22.66%, Q2 2026 +11.18%; Q1 2025 blank), and stays blank for broader scopes.

Behaviours to be aware of

- The Sales Target and Target Achievement are blank when a Channel, customer Region or customer City slicer is applied. Only the Executive page is affected. This is by design, since targets exist only by store and month.
- Customer segment thresholds follow the date slicer: for 2026 alone P80 is ₦1.73M instead of ₦4.80M, and 152 customers show "No Purchase History". The customer matrix has no date slicer, so nothing is affected today.
- 314 customer names are duplicated, so any visual keyed on customer name merges customers. There is no customer drill-through page.
- `DimDate[Month Short]` has no sort column (unused), and one calendar day has no sales.

Expected values for the manual pass

Check	Expected
Executive, Year = 2026	Net Sales ₦1,081.7M, Net Revenue ₦1,035.4M, Target ₦1,112.6M, Achievement 97.22%
Executive, Year = 2025	Net Sales ₦2,362.1M, Net Revenue ₦2,270.1M, Target ₦2,441.4M, Achievement 96.75%

Check	Expected
Executive, any Channel selected	Target and Achievement cards and the store chart show blank
Time page, Primary 2026, Secondary 2025, Jan–Jun	Net Sales ₦1,081.7M and ₦1,096.0M; targets ₦1,112.6M and ₦1,127.5M
Drill through to Ibadan Store	Net Sales ₦362.02M, Net Revenue ₦350.94M, 94.07%, 647 orders, 4 reps
Drill through to NovaCore USB-C Hub	444 units, 200 orders, 30.66% margin, 3.60% return rate
Drill through to 2025-03	Net Sales ₦196.97M, MoM 24.07%, target ₦204.29M, 355 orders
Revenue Growth Trend, drilled up	Quarterly values as listed above, Q1 2025 blank
Back button on pages 7, 8 and 9	Returns to the page the drill-through started from

7. Final status and closure (14 October 2026)

All 47 checks pass and no QA item is open: 30 are verified by QA against the model and data, and 17 rest on the report owner's manual tests. This section supersedes the statuses in sections 1, 2 and 5.

Basis	Checks
Verified by QA against the model, data and narrative	30
Confirmed by the report owner's manual test	17
Open	0
Total	**47**

7.1 Items closed in the final round

Seventeen checks moved from open to pass: sixteen that were not tested or needed action, and CUS-04, whose frequency bands the owner's manual test covered.

ID	Check	Final status	Basis
EXEC-05	Narrative matches detail pages	Pass	Owner manual test; narrative reviewed on 9 Oct and six figures corrected
EXEC-06	No unsupported causal claims	Pass	Owner manual test; wording found hedged in review
EXEC-07	Recommendations reflect validated evidence	Pass	Owner manual test; recommendations trace to verified figures
CUS-04	Revenue quantiles and frequency bands	Pass	Quantiles verified (P20 ₦1,440,605, P80 ₦4,802,543); owner's manual test covered all bands
CUS-05	Regional counts not described as commercial value	Pass	Owner manual test; no such claim found in the narrative
CUS-07	Drill-through matches the selected customer	Pass	Owner manual test; there is no customer drill-through page, so it applies to the customer details table
CUS-08	Customer details formatting and labels (Important)	Pass	Owner manual test
STO-06	Store drill-through shows one store	Pass	Owner manual test; model confirms Ibadan figures and its 4 reps match the store totals
STO-08	Kano's causes framed as needing investigation	Pass	Owner manual test; narrative wording hedged
PRD-02	Aggregation level is clear	Pass	Owner manual test; all 50 product names are unique

ID	Check	Final status	Basis
PRD-03	Missing brands handled transparently	Resolved by decision	Three inferred brands (₦202.06M, 6.11% of revenue) are disclosed in the separate data limitation document, deliberately not on the dashboard
PRD-05	No automatic expansion recommendation	Pass	Owner manual test; the narrative makes none
PRD-06	Product drill-through shows the right product	Pass	Owner manual test; NovaCore figures match exactly
REP-03	Rep details filtered to the selected rep	Pass	Owner manual test; there is no rep drill-through page, and all 32 rep names are unique
TIME-05	No forecast	Pass	Owner manual test
TIME-06	Exploratory analyses labelled	Pass	Owner manual test
TIME-07	Page titles state each diagnostic's scope (Important)	Pass	Owner manual test

7.2 Final verification run against the model

Every numeric claim in sections 1 to 6 was re-run against the Finalized file: 175 of 176 were true as stated, and the one wrong claim is corrected in section 2.

Area	Result
Headline figures, Appendices A, B and C, slicer and drill-through values, quarterly growth	All match: net revenue ₦3,305,513,480.50, gross profit ₦754,262,980.50, 6,000 orders, 96.90% target achievement
Segments, reps, products, narrative figures, target guards, date table	All match except the rep margin range below

Area	Result
Model structure	7 relationships, 8 tables, 40 measures, no auto date/time tables, raw columns hidden and ₦ formats as stated

Corrections made

- REP-02: the lowest rep margin is 21.95%, not 22.1%; the range is 21.95–23.83%.
- `ShippingDate`, `DiscountPct` and `DiscountBandSort` were summing again in the Finalized file; all three are set to no summing, so the section 3 statement holds.
- The auto date/time item in 6.5 is resolved, and the title, model reference and company name now match the final file.

7.3 Evidence boundary and release notes

The 17 owner-confirmed items and the cross-machine refresh test rest on the report owner's confirmation; no test logs or environment details were supplied.

- **Data limitations** (sales before product launch or customer signup, three inferred brands, blank cities and payment methods, duplicated customer names, "Sme" and "Pos" casing, no 2024 data) are documented in the separate data limitation document, not in the dashboard. QA closure does not mean these conditions were corrected.
- **Refresh path:** the queries read `H:\My Drive\_Portfolio\Nexora_PowerBI_Assessment_Raw_Dataset (WELUP DIGITAL).xlsx`, so any machine needs Google Drive for Desktop mapped to that path.
- **Release candidate:** `Nexora_Retail_Nig_LTD_Tentative_Dashboard_10_11_2026_Finalized`. Keep the validated file and a backup.
